November 2016

Continuum Management Anstalt

Financial advisory, investment, green energy and environmental services.

Company Summary

Continuum Management Anstalt, a Liechtenstein based company, is a provider of financial advisory consulting services, renewable energy project planning and investment services and environmental solutions.

Founded by its' CEO Martin Mayer in 2007 in Vaduz, Liechtenstein from a background of many years' experience in financial asset operations and portfolio management, the company has developed its' diverse business strategy to build a cross sector financial advisory, investment and renewable energy consulting company.

Joining Mr Mayer in Continuum senior management is David Roots in the role of COO. David brings a wealth of operational and management experience in the renewable energy sector. David has worked in wind and solar, biomass and waste to energy projects both from an operational as well as investment stand point.

Providing Continuum with legal and compliance expertise in the financial advisory consulting services is Dr. Markus Mayer who has over twenty five years' experience in applicable tax law and compliance. Supplying a wealth of experience in renewable energy and environmental operations is Tim Bennett, Projects and Operations Director, who has over fifteen years of experience in developing renewable energy projects across Europe and Asia.

The Continuum team, with its' wide and varied experience, is able to offer clients an unrivalled range of consulting, investment and advisory services in both the financial and energy sectors.

We are committed to provide ethical and sustainable project development and investment into green energy and environmental services.

In 2012 the company became involved in its' first renewable energy project providing the detailed planning and project management to attract the necessary finance enabling project development.

In 2015 the company added environmental services to the portfolio of services providing clients with green solutions for land and soil remediation, water decontamination and emissions filtering for carbon and greenhouse gases.

Services include:-

- Renewable project evaluation and consultancy
- Project management
- Preparation and presentation of projects for financing
- Discovery and due diligence of projects for investors
- Infrastructure management and advice
- Environmental remediation services
 - Soil and land remediation and cleansing
 - Water decontamination to potable levels
 - Emissions filtering for elimination of greenhouse gases
